## Directions:

Nitenpyram Capsules kill adult fleas and is indicated for the treatment of flea infestations on dogs, puppies, cats and kittens 2 pounds of body weight or greater and 4 weeks of age and older. A single dose of Nitenpyram kills the adult fleas on your pet. If your pet gets re-infested with fleas, you can safely give another dose as often as once per day. To give Nitenpyram Capsules, place the pill directly in your pet's mouth or hide it in food. If you hide the pill in food, watch closely to make sure your pet swallows the pill. If you are not sure that your pet swallowed the pill, it is safe to give a second pill. Treat all infested pets in the household. Fleas can reproduce on untreated pets and allow infestations to persist. Consult with your veterinarian prior to using Nitenpyram.
